

## **Practical - 1: Creating account, repository on GitHub and Cloning repository in GitHub Page**

### **A) To Create an Account:**

1) Go to GitHub.com through any web browser

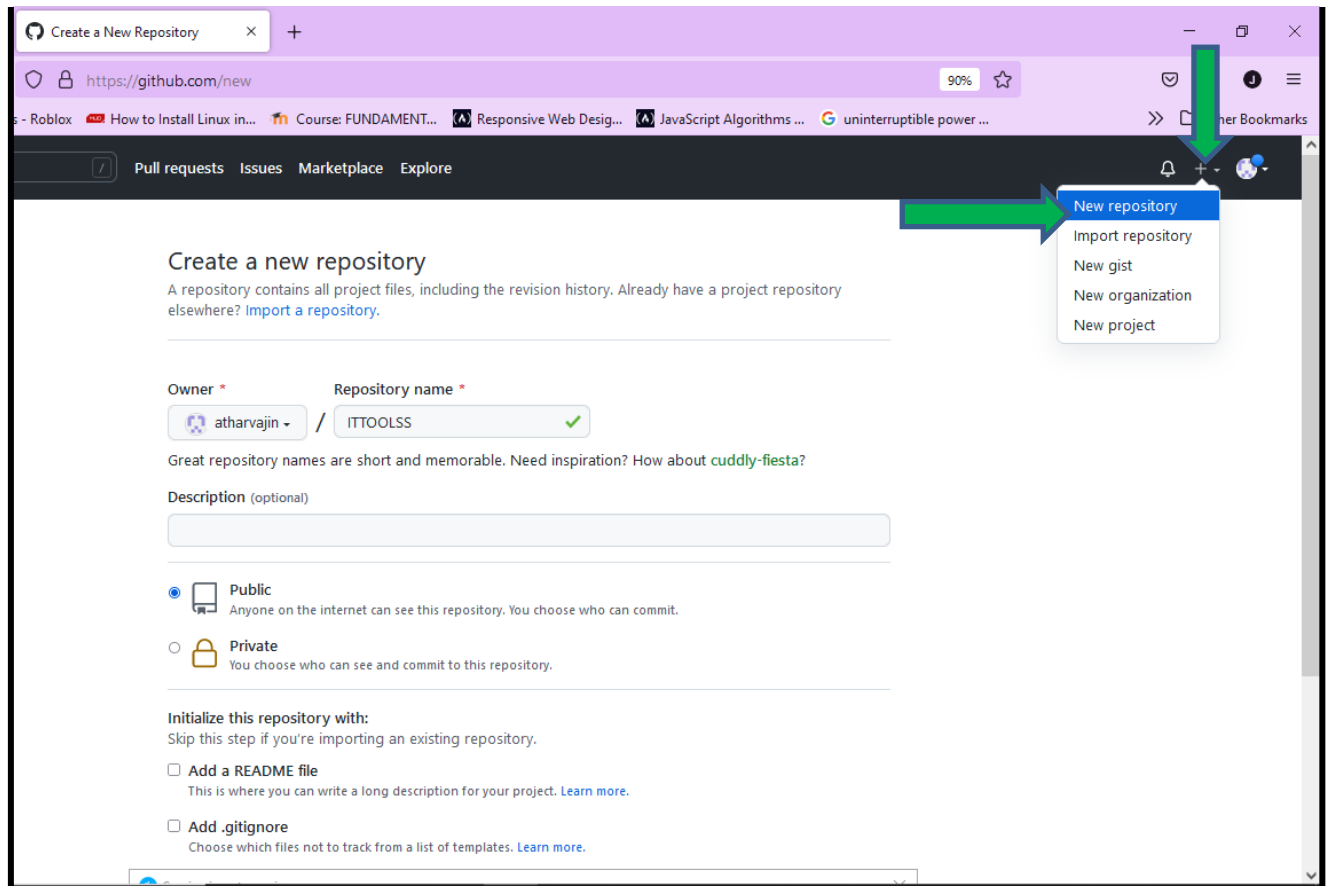

2) Sign up with your email and complete verification

## **B) Create a New Repository :**

1) Click on + and then select New Repository

2) Then write the name of the Repository and select Public Option so that everyone can see and select any other options you want and finally click on Create Repository.

Create a New Repository

https://github.com/new

## Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository.](#)

Owner \* Repository name \*

atharvajin / ITTOOLSS ✓

Great repository names: ITTOOLSS is available. Need inspiration? How about [cuddly-fiesta](#)?

Description (optional)

☒ Public  
Anyone on the internet can see this repository. You choose who can commit.

☐ Private  
You choose who can see and commit to this repository.

Initialize this repository with:  
Skip this step if you're importing an existing repository.

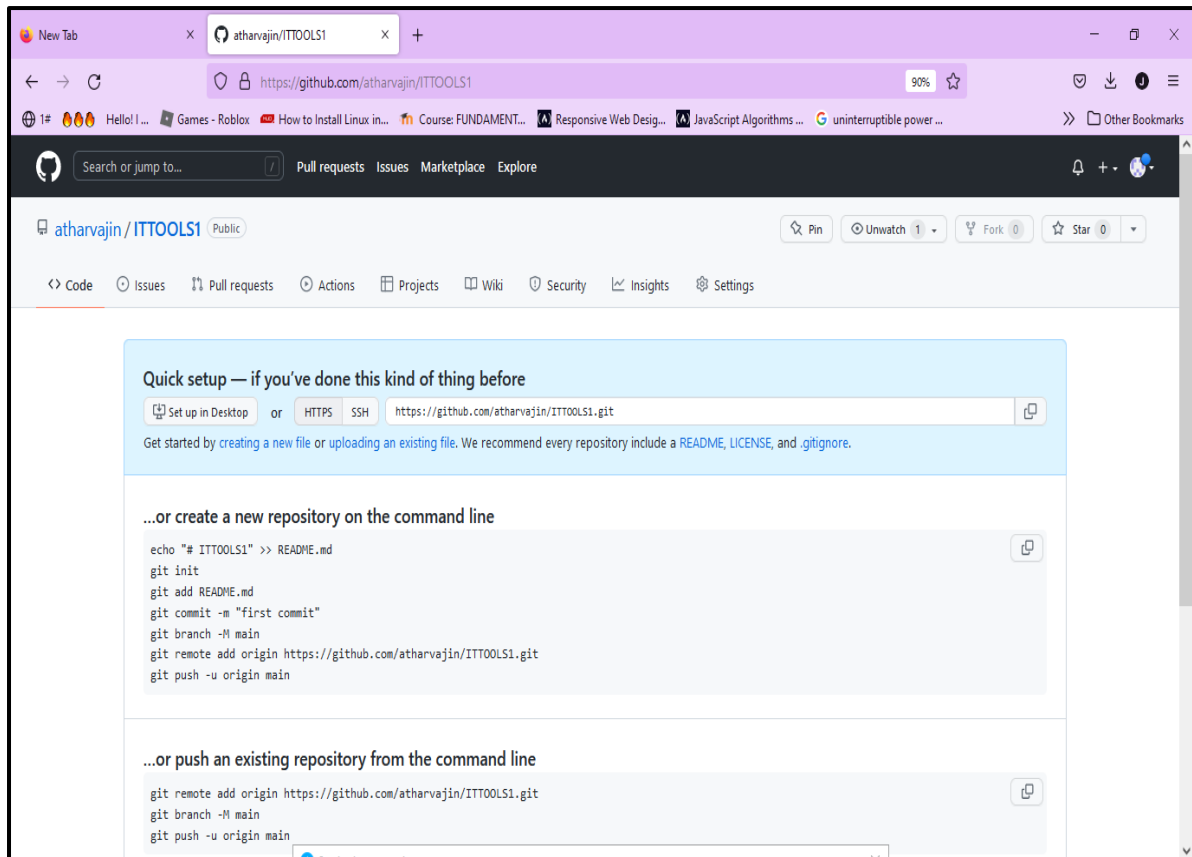

☐ Add a README file  
This is where you can write a long description for your project. [Learn more.](#)

☐ Add .gitignore  
Choose which files not to track from a list of templates. [Learn more.](#)

☐ Choose a license  
A license tells others what they can and can't do with your code. [Learn more.](#)

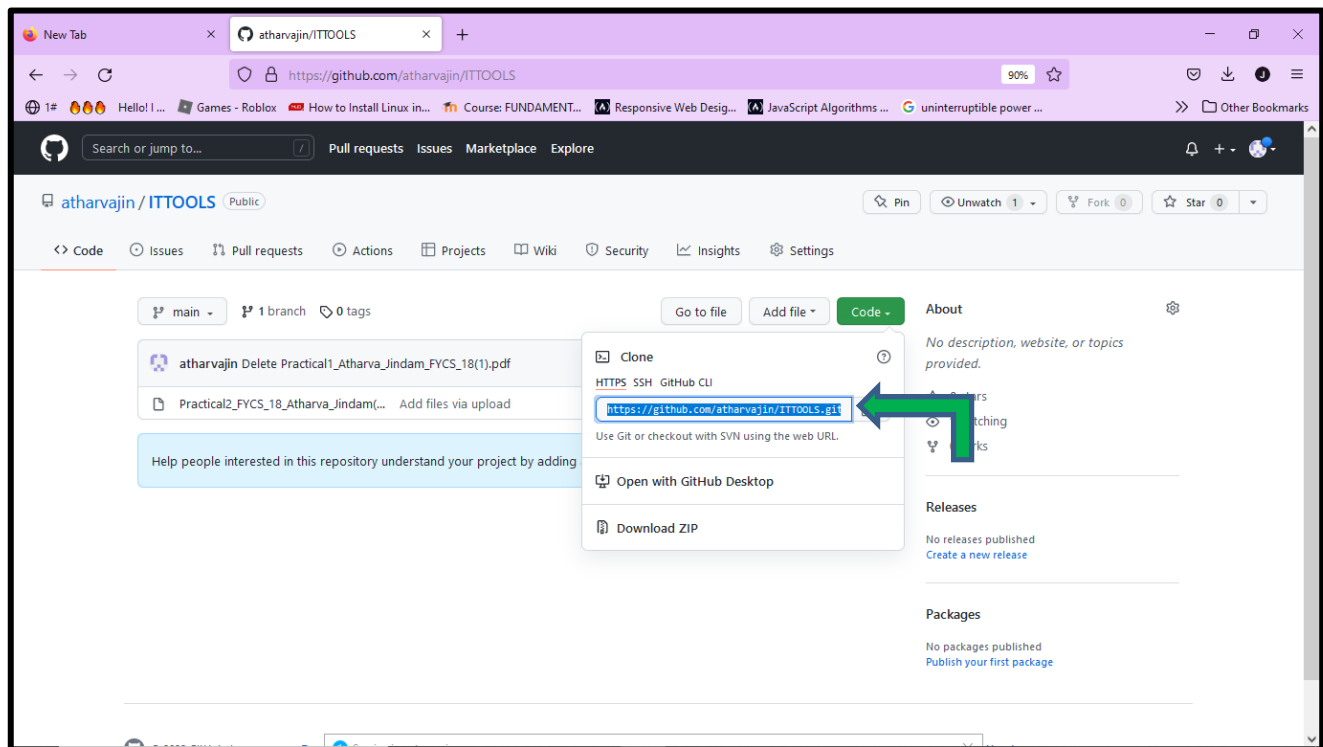

Create repository

### 3) Your Repository is Created

### C) Steps to Clone Repository:

1) Firstly copy the link of the repository given

And then Share the link to the Repository
